Grading Guide

Exceptional: (uncommon) The audio is exceptionally clean and clear with a room tone measuring less than -70db after normalization to -3db. It is well treated and completely dry with no distracting reverb.

Professional Broadcast: The audio is clear with a room tone/ noise floor less than -60DB after normalization to -3db. There is no discernable reverb or other distinguishing sounds.

Usable: The audio is reasonably clean with a room tone/ noise floor of -55db after normalization to -3db. There may be a build up of low frequencies or minor reverb that can be easily corrected with minor EQ.

Needs Improvement: This audio is not recommended for use. The space likely needs further isolation, treatment, or both. There may be technical issues that need to be corrected such as mismatched settings or poor equipment. Details will be included in an Email.
